

DEGAUSSER TAKE-BACK PROGRAM RECYCLE AND UPGRADE

At Data Security, Inc., we are committed to environmental stewardship. As such, our Degausser Take-Back program is a free service that includes the appraisal, disassembly, recycling, and safe disposal of any degausser. We identify the safest and most environmentally sound methods to reuse, recycle, and properly dispose of your degaussing equipment once it has reached the end of its life cycle. Working or not, we accept any degausser, regardless if it's manufactured by Data Security, Inc. or a competitor.

Degaussers which contain rare or costly reusable components qualify for discounts on upgrades. Based on a fair market value, we'll apply a credit towards any new or refurbished product from Data Security, Inc. Even if your degausser doesn't hold monetary value, we will still recycle it responsibly for you. To participate, contact your Data Security, Inc. representative to request an appraisal and schedule a pickup.

WARNING: Do not attempt to disassemble a degausser on your own; these machines may contain materials that could put you at risk of serious injury when improperly disassembled. Please leave it to the professionals at Data Security, Inc.
